

Keeping Emulation Environments Portable

Long-term preservation of digital objects

INFuture 2011

Guillaume Badou Barthélemy  
Bibliothèque nationale de France { BnF

Zagreb, 10 & 11 Nov. 2011

Allow long-term preservation, access and rendering of digital objects

- Sustain a long-term and easy access to digital documents
  - Static objects (text, image, sound, video)
  - Dynamic objects (multimedia, software, data base, video game, website)
- By developing tools allowing to store and emulate via an *Emulation Access Platform*, and represent the content of the original media
- Create a « universal » virtual machine to run the emulator
  - This software needs to be easily adaptable to any future computer to ensure a sustainable emulation platform

➔ a solution for memory institutions, companies and individuals to access digital documents through time

- Because Multimedia carriers gradually become obsolete
  - ➔ Transfer carriers to files (images)
    - tapes, disks, CDs, DVDs, cartridges deteriorate
    - drives allowing to read them also do (mechanical parts, dedicated to types and generation of machines)
- Because computers and consoles also become obsolete
  - ➔ Replace machines by a program able to mimic the original machine (emulator)

## Example Thomson TO7 (1982)

Carrier has to be :

READ, DIGITIZED

Binary information is being transferred to an image file

Program is run by the emulator

SUBSTITUTION / VIRTUALISATION

Original environment

Contemporary environment

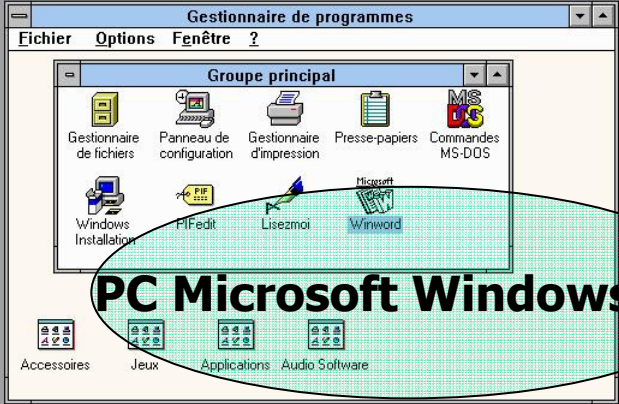

Original emulated environment

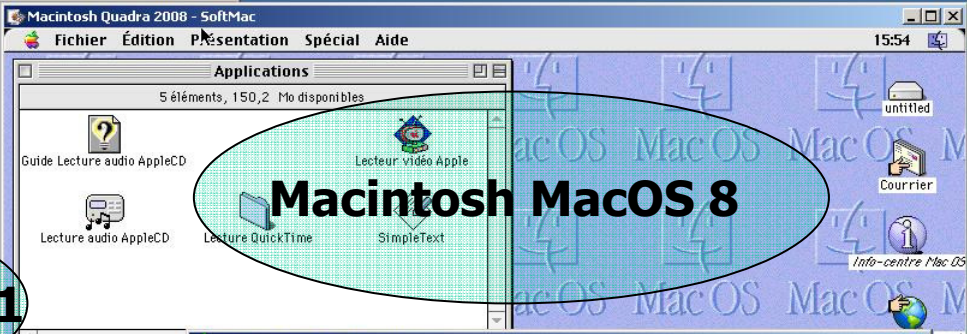

This example shows a videogame, but the original publication can be :

- Text
- Image, video, sound
- Program (wordprocessor, videogame, etc.)
- Data base
- Website
- etc.

... and it can be from various platforms and Operating Systems ...

PC Microsoft Windows 3.1

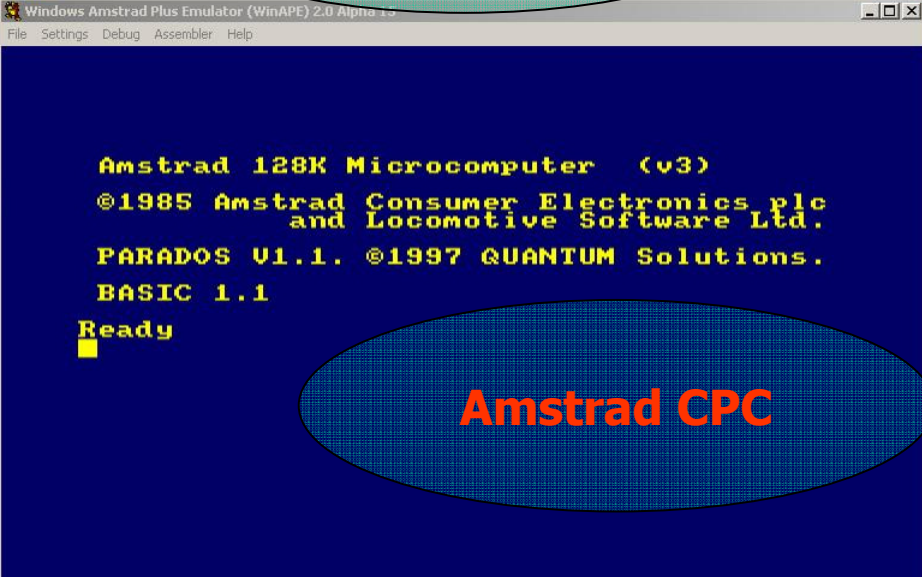

Macintosh MacOS 8

Thomson TO7/70

Apple II (Loderunner)

Amstrad CPC

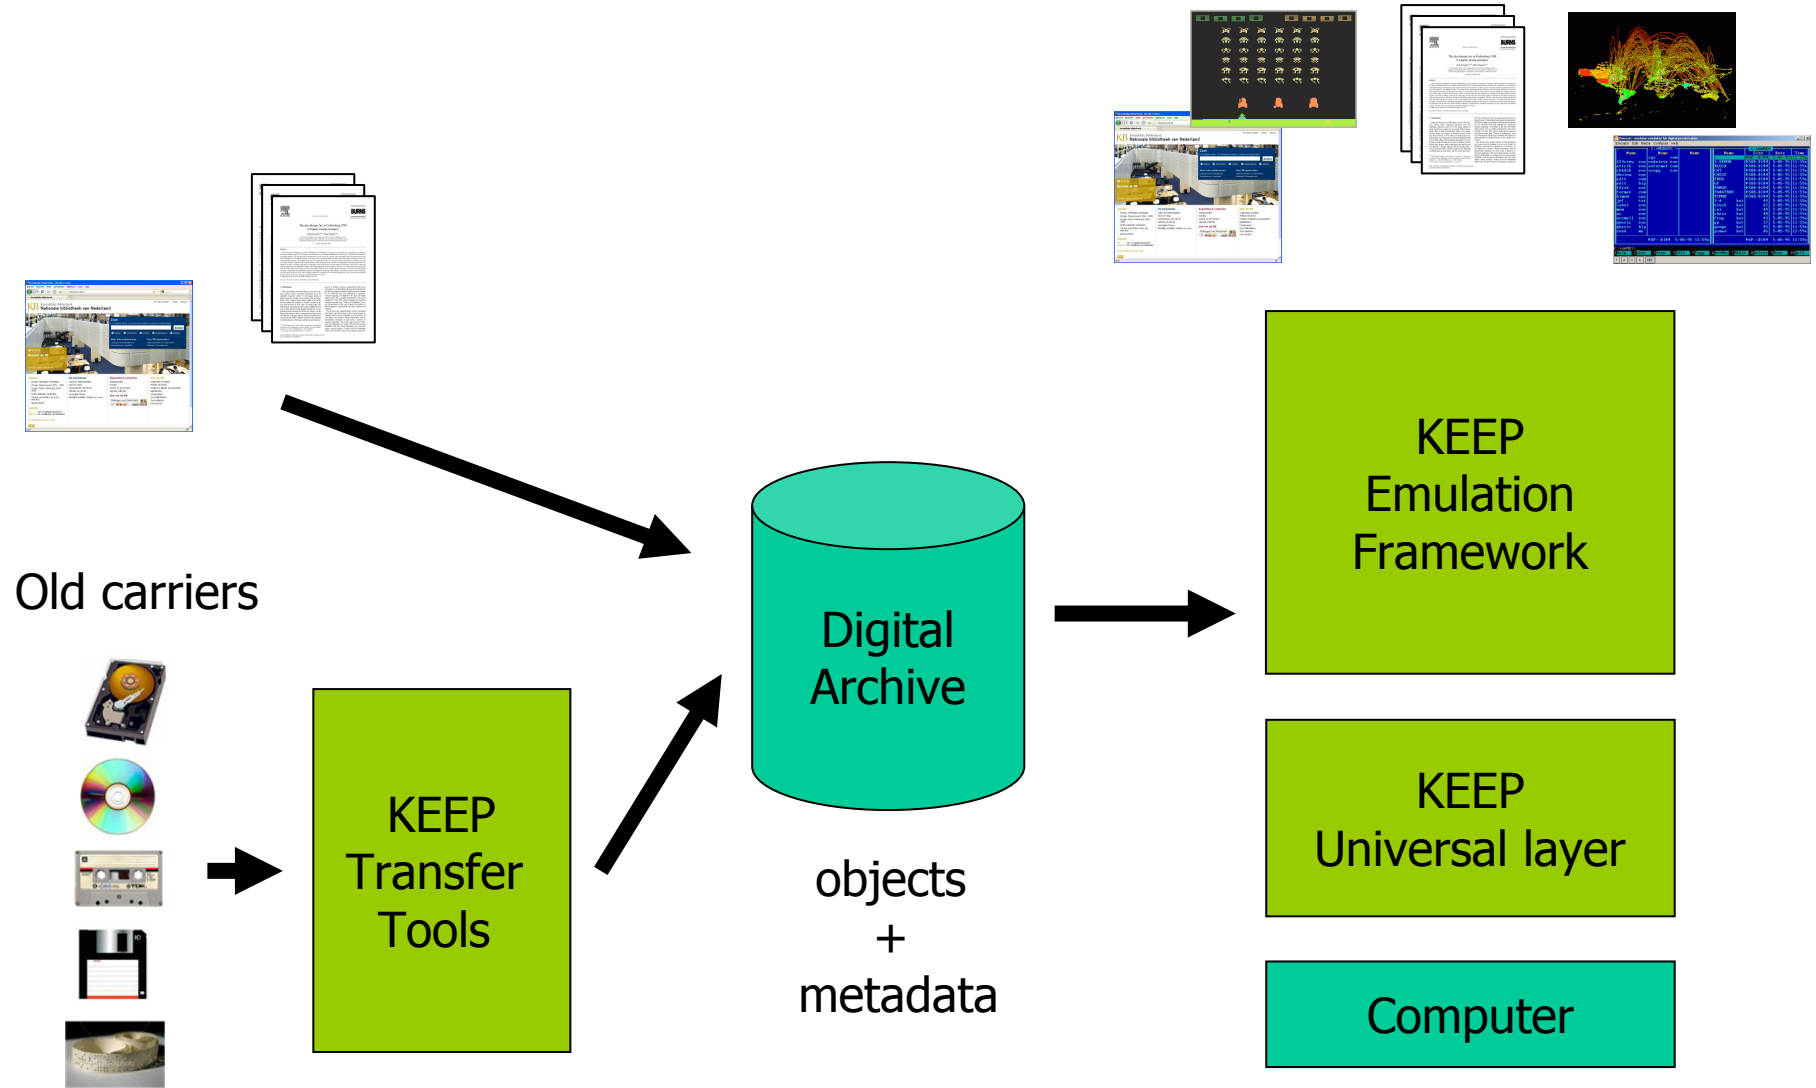

Nintendo SNES

- Migration = successively convert the digital format
  - Applicable to text documents, images, videos.
  - Less suitable for rare formats or applications for which no strict conversion is possible.
  
- Emulation = adapt modern computer to original environment
  - Applicable to all kinds of digital items,
  - Without successively having to adapt to each generation
  - but requires an important initial effort

- **FP7 project**
  - **ICT Digital libraries and technology-enhanced learning priority**
- **From February 2009 to February 2012**
- **BnF is the Project coordinator**

- **8 partners ranging from libraries and universities to gaming industry :**

- Bibliothèque nationale de France – France
- Deutsche Nationalbibliothek – Germany
- Koninklijke Bibliotheek – Netherlands
- University of Portsmouth – UK
- Joguin SAS – France
- Tessella Support Service – UK
- European Games Developer Fed. – Sweden
- Computerspiele Museum – Germany
